

# Leading Evidence-Based Practice (EBP)

**Lynn Gallagher-Ford PhD, RN, NE-BC, DPNAP, FAAN**  
Chief operating officer and clinical core director of the Fuld Institute for EBP at The Ohio State University

**Penelope F. Gorsuch DNP, RN, NEA-BC, FACHE, USAF Col (ret)**  
Assistant professor of clinical practice and assistant director of the Clinical Core, Fuld Institute for EBP at The Ohio State University

The pandemic demonstrated that teams could very quickly integrate new evidence to improve clinical care, this was EBP in action! There is widespread agreement that nursing and healthcare cannot go back to the "old way of doing things." Moving forward will require implementing evidence-based strategies efficiently and effectively. To accomplish this, leaders need a deep and operational knowledge of EBP to access proven strategies and implement them in organizations, all the while improving quality and engagement.

In collaboration with the Fuld Institute for Evidence-Based Practice (EBP) at The Ohio State University, ONL is excited to launch this NEW leadership development program! It will provide attendees with a deeper understanding of leadership styles, organizational culture, and how EBP strategies will support healthcare's move into a new world. From C-suite to direct care managers, and nurse directors to educators and charge nurses, this is an enterprise-wide leadership development program to cross all disciplines.

[REGISTER](#)

Dates: December 1-2, 2021, 8am- 5pm EST  
Registration fee: \$999 per person  
Attendees are eligible for 16.5 contact hours

For more information, questions, or to register a group, email [info@oonl.org](mailto:info@oonl.org) or call 781-272-3500.

## Program Highlights

- Learn how a leader creates a vision, builds team engagement, and develops practices to improve quality through the evolution and importance of EBP.
- Explore personal leadership strengths and discern how key attributes of leadership styles can be leveraged to drive EBP on units and in organizations.
- Assess key elements of your organization, including the relationship between culture and the change process.
- Assess common barriers to implementation of EBP in real-world settings and develop strategies to effectively build competence and engagement while implementing EBP.
- Learn how to frame clinical and leadership questions and discover successful strategies for finding the best evidence to inform practice.
- Learn how to differentiate, construct and critique the components of an effective PICOT question to support EBP practice change and staff engagement in the process.
- Describe the process of critical appraisal and evaluation of evidence.
- Analyze key checkpoints in planning an EBP change and compose strategies for implementation.
- Learn how to measure outcomes and track external benchmarks that impact healthcare organizations.
- Create an outcomes and evaluation plan for a sample EBP project.

The answers are in the literature - help your team find and implement best practices and tested strategies
